⦿ Battery Indicator

Lithium battery (3.7V): The battery voltage is lower than 3.3V the keyboard **Ctrl_L key Red** indicator flashes to indicate, **Ctrl_L key Green** when charging the color indicator light is always on, and when it is full, the Ctrl_L key indicator light goes out and returns to the normal backlight.

⦿ 2.4G Pairing

After the keyboard is turned on, press the **FN+4** Key combination to enter 2.4G mode, and then press and hold the **FN+4** Key combination for 3S to enter the pairing mode. The indicator light flashes quickly, and the receiver is inserted at this time. After the pairing is successful, the code matching is exited, and the indicator light is always On for 2S, 30s after the paired device is not found, the exit code matching mode indicator light goes out, and the keyboard enters sleep.

⦿ Bluetooth Pairing

After the keyboard is turned on, press the **FN+1/2/3** Key combination to enter the Bluetooth mode, and long press the **FN+1/2/3** Key combination for 3S, the keyboard enters the code matching state, the indicator light flashes quickly, and the device indicator light is always on for 2S. The device not connected indicator goes off, and the keyboard enters the sleep state.

⦿ Connect Back Instructions

After the keyboard is turned on or awakened from the sleep state, only the current device will be reconnected; if the reconnection is unsuccessful, it will enter the sleep state. After the key is awakened, it will continue to connect back.

The green indicator light flashes slowly during the 2.4G reconnection process, and the indicator light stays on for 2S after connection. Press the button during the reconnection process to extend the reconnection time. Within 10 seconds after releasing the button, the reconnection fails, the indicator light is off, and the keyboard enters the dormant state. If the pairing succeeds, it enters the code matching mode again. After the code matching fails, the keyboard will enter the dormant state, but the data of the last successful code matching will be retained; if you leave the keyboard for 2 minutes, the backlight will be automatically turned off and the power saving mode will be entered. After entering the power saving mode, let it stand for another 28 minutes, and the keyboard will enter the deep sleep mode. In the power saving mode, press the button to wake up the keyboard, and the button will react immediately. After entering the deep sleep mode, the first keystroke will only wake up the keyboard.

The blue indicator light flashes slowly during the Bluetooth connection. After connection, the indicator light will stay on for 2 seconds. During the connection process, pressing the button can extend the connection time. Within 10 seconds after releasing the button, the connection fails, the indicator light goes out, and the keyboard enters the sleep state. If the pairing succeeds, it enters the pairing mode again. After the pairing fails, the keyboard will enter the sleep state, but the data from the last successful pairing will be retained; let the keyboard sit for 2 minutes to automatically turn off the backlight and enter the power saving mode. After entering the power saving mode, the keyboard will enter the deep sleep mode for 28 minutes. In the power saving mode, press the key to wake up the keyboard, and the key will respond immediately. After entering deep sleep mode, the first keypress is only used to wake up the keyboard.
